Treating myelosuppression or any condition involving
Treating myelosuppression or any condition involving
Treating myelosuppression or any condition involving
Treating myelosuppression or low levels of haematopoietic cells
Claim 1; Page 20; 31pp; English.

Claim 2; Page 20; 31pp; English.

Claim 3; Page 20; 31pp; English.

Claim 4; Page 20; 31pp; English.

Commandian chemokines selected from gro alpha. Use of
This polypeptide sequence comprises human gro alpha. Use of
Commandian chemokines selected from gro alpha, gro beta (W17671),
Gro gamma (W17672) or KC (W17669) for mobilising haematopoietic
Cc cells is claimed. The chemokines, optionally used together with a
Cc growth factor or other haematopoietic regulator, are used to treat
myelosuppression or any condition that involves immunosuppression
Cc growth factor or other haematopoietic disorders, aplastic anaemia
Cc rautoimmune disease, or low production/differentiation of
Deripheral blood stem cell transplants in patients being treated by
Cc chemotherapy. Chemokines having an N-terminal deletion are more
Cc active, e.g. by 2 orders of magnitude, than the full-length protein.
When used with a colony stimulating factor (CSF), a synergistic
Cc reduced. Compared with conventional methods of stem cell transplants,
Cc use of mammaolian chemokines provides a more rapid release of
Cc peripheral blood mononuclear cells and/or platelets, reducing risk of
Cc infection and allowing use of higher doses of chemotherapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Use of chemokine(s) such as KC and gro-alpha - to treat or prevent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sepsis, particularly septic shock claim 1; Page 18-19; 28pp; English.

A claimed method of treating or preventing sepsis comprises administering to an animal an effective amount of a chemokine selected from mature murine KC (see W18023), human gro alpha (W18024, human gro bete selected from second selected from mature probable selected from mature selected see W18025) and human gro alpha (see W18025), modified fragments of these chemokines and multimeric proteins comprising an association of two chemokine proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

Sepsis can occur in hospitalised patients, and a consequence of bacterial sepsis is septic shock. The method of the invention provides a treatment for sepsis, particularly septic shock, which is a major cause of death in intensive care units. Septic shock syndrome apparently has intractable resistance to the effects of a variety of highly potent antimicrobial agents. Survival is increased by treatment with the chemokines, both prophylactically and after infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               28-MAR-1997 (first entry)
Chemokine-like protein PF4-414.
Human; chemokine; PF4-414; platelet factor-4; mutant; Gro-alpha; active domain; melanoma growth stimulating factor-alpha; myelosuppressive; cytostatic; antitumour; leukaemia; polycythaemia vera; hypermakaryocytopoiesis; therapy; diagnostic; myeloid progenitor cell; expansion; bone marrow transplantation.

Treating and preventing sepsis in animals - by using two modified group and preventing sepsis in animals - by using two modified grample 1; Page 18: 26pp; English.

Treating and preventing sepsis under the human chemokine gro-beta stample 1: Page 18: 26pp; English.

This is the amino acid sequence of the human chemokine gro-beta mature polypeptide. The invention relates to a method of preventing and treating sepsis using chemokines selected from mature or modified murine RC (see W81499), or human gro-alpha (see W81498), gro-beta or gro-gamma (see W81499). A claimed method uses a dimeric chemokine consisting of 2 covalently linked modified gro-beta proteins (amino acids 5.73 of the mature polypeptide)

In which the proteins are linked by 2 intermolecular disulphide bonds between C5-C31 and C7-C47. Further claimed is administering the chemokine in conjunction with an anti-infective agent. The chemokine sepsis since antimicrobial agents alone have failed to prevent sepsis since antimicrobial agents alone have failed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Screening for cpds. with anti-heparanase activity - by detecting inhibition of heparin or heparan sulphate degradation, potentially useful for treating arthritis, restenosis, cancer. Claim 12; Page 39; 60pp; English.

Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in R70786-804. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVL1392 baculovirus vector, and expression in Sf9 cells in the presence of reduced glutathione and dithiothreitol.
                                                                                                                                                                                                                  ö

Treating myelosuppression or any condition involving inmunosuppression or low levels of haematopoietic cells inmunosuppression or low levels of haematopoietic cells claim I; Page 21; 31pp; English.

Trip polypeptide sequence comprises human gro beta. Use of mammalian chemokines selected from gro alpha (W17670), gro beta, gro gamma (W17672) or KC (W17669) for mobilising haematopoietic cells is claimed. The chemokines, optionally used together with a growth factor or other haematopoietic regulator, are used to treat myelosuppression or any condition that involves immunosuppression or nay condition that involves immunosuppression or low levels of haematopoietic cells, e.g. infection, cancer, myelospoietic dysfunction, haematopoietic disorders, aplastic anaemia or autoimmune disease, or low production/differentiation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tose of chemothreks) such as not also give appropriate to treat of prevent a sepsis, particularly septics shock claim 1; Page 19; 28pp; English.

Claim 1; Page 19; 28pp; English.

A claimed method of treating or preventing sepsis comprises administering to an animal an effective amount of a chemokine campristering to an animal an effective amount of a chemokine selected from mature murine KC (see W18023), human gro alpha (see W18024), human gro beta (W18025) and human gro gamma (see W18026), modified fragments of these chemokines and multimeric proteins comprising an association of two chemokine proteins.

Sepsis can occur in hospitalised patients, and a consequence of sepsis can occur in hospitalised patients, and a consequence of parterial sepsis is septic shock. The method of the invention provides a treatment for sepsis, particularly septic shock is a major cause of death in intensive care units. Septic shock is yndrome apparently has intractable resistance to the effects of a variety of highly potent antimicrobial agents. Survival is increased by treatment with the chemokines, both prophylactically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                   WPI: 97-298111/27.
Use of chemokine(s) such as KC and gro-alpha - to treat or prevent

haematopoietic or bone marrow cells. A claimed application is in peripheral blood stem cell transplants in patients being treated by chemokines having an N-terminal deletion are more active, e.g. by 2 orders of magnitude, than the full-length protein. When used with a colony stimulating factor (CSF), a synergistic effect is achieved and the dose, and side-effects, of CSF can be reduced. Compared with conventional methods of stem cell transplants, use of mammacolian chemokines provides a more rapid release of peripheral blood mononuclear cells and/or platelets, reducing risk of infection and allowing use of higher doses of chemotherapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Macrophage inflammatory protein; megakaryocytopoiesis; MIP-1; MIP-2; thrombocythemia; reactive thrombocytosis; stroke; emboli; platelet; myeloproliferative disorder.

                                                                                                                               Suppression of megakaryocytopolesis - by administration of macrophage inflammatory protein-1 or -2 bisclosure; page 18. 26pp; English.

A claimed method for reducing the no. of circulating platelets in the bloodstream of a mammal comprises admin. of MIP-1 and/or MIP-2 or their analogues to induce such a reduction. The MIP-1, MIP-2 or analogue may be operatively linked to a carrier. The MIPs can be used to inhibit megakaryocytopolesis to effect in vivo reduction of platelet nos. They can be used to treat disorders with excessively high platelet counts such as thrombocytosis, stroke, pulmonary emboli sequence 73 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Screening for cpds. with anti-heparanase activity - by detecting inhibition of heparan sulphate degradation, potentially useful for treating arthritis, restenosis, cancer. Claim 12; Page 40; 60pp; English.
Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in R70786-804. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVL1392 baculovirus vector, and expression in Sf9 cells in the presence of reduced glutathione and dithiothreitol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Macrophage inflammatory protein 2-alpha; gro-beta/MIP-2-alpha;

The cDNA clone coding for inflammatory cytokine Gro-beta was The cDNA clone coding for inflammatory cytokine Gro-beta was consolated from a mezerin and calcium ionophore-stimulated leukocyte cDNA library. The amino acid sequence of Gro beta was deduced from the nucleotide sequence. The level of Gro beta in inflammatory cresponse cells can be used as an indication of a test substance's inflammatory activity and to diagnose colon cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure: Fig 2: 68pp; English.

The sequence was deduced from the DNA sequence obtd. by screening the sequence was deduced from the DNA sequence was deduced from the DNA. The sequence was deduced from the U937 cDNA library prepd. from poly-A+ RNA from PNA treated and LPS stimulated cells, using as probe a fragment isolated from the mMIP-2 cDNA (see Q20728) encoding most of the mature mMIP-2 amino acid sequence. Two classes of human cDNA homologous to mMIP-2 were found designated alpha and beta. The alpha form reproduced here is claimed in W09200327; the beta form (Q20530) is claimed in W09200327; the beta form (Q20530) is claimed in W09200326. The alpha form is the more abundant of the two. The wound healing, to modulate myelopoiesis and to induce adjuvant

1 KACLNPASPMVK 12 Title: Description: Perfect Score: Sequence:

Scoring table:

PAM 150 Gap 15

Post-processing:

77977 seqs, 28268293 residues

Searched:

Minimum Match 0% Listing first 45 summaries

Database:

1:swissprot swiss-prot37

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 24.025; Variance 25.608; scale 0.938

#title Identification of a novel granulocyte chemotactic protein (GCP-2) from human tumor cells. In vitro and in vivo comparison with natural forms of GRO, IP-10, and IL-8.
                                                                                                                            Schroeder, J.M.; Persoon, N.L.M.; Christophers, E. J. Exp. Med. (1990) 171:1091-11100 Lipopolysaccharide-stimulated human monocytes secrete, apart from neutrophil-activating peptide l/interleukin 8, a second neutrophil-activating protein. NH-2-terminal amino acid sequence identity with melanoma growth stimulatory activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 #14pe complete

There appears to be a second beta-thromboglobulin-like human gene.

There appears to be a second beta-thromboglobulin-like human gene.

Connective-fissue activating peptides (CTAP) are a group of proteins capable of activating connective tissue cells. CTAP-I.

-III and -PRA and -PRA are of lymphoid, tumor cell, human platelet, and polymorphonuclear leukocyte origin, respectively.

CTAP-III, a monomer isolated from platelets, stimulates DNA synthesis, mitosis, glycolysis, intracellular cAMP accumulation, prostaglandin E2 secretion, and synthesis of hyaluronic acid and sulfated glycosaminoglycan. It also stimulates the formation and secretion of plasminogen activator by human synovial cells.

Proteolytic removal of the first four residues of CTAP-III produces the active peptide beta-thromboglobulin, which is released from platelets along with platelet factor 4 and platelet-derived

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 16.909; Variance 49.053; scale 0.345

                                                                                                                                                                                                                                                                  While of chemokine(s) such as KC and gro-alpha - to treat or prevent sepsis, particularly septic shock
Claim i, Pages 19: 28pp; English.
A claimed method of treating or preventing sepsis comprises administering to an animal an effective amount of a chemokine selected from mature murine KC (see W18023), human gro alpha (see W18024), human gro beta (W18025) and human gro alpha (see W18024), human gro beta (W18025) and human gro alpha (see W18024), modified fragments of these chemokines and multimeric proteins comprising an association of two chemokine proteins. Sepsis can occur in hospitalised patients, and a consequence of bacterial sepsis is septic shock. The method of the invention provides a treatment for sepsis, particularly septic shock, which syndrome apparently has intractable resistance to the effects of a variety of highly potent antimicrobial agents. Survival is considered to the chemokines, both prophylactically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Suppression of megakaryocytopolesis - by administration of macrophage inflammatory protein-1 or -2 bisclosure; Page 18; 26pp; English.

A claimed method for reducing the no. of circulating platelets in the bloodstream of a mammal comprises admin. of MrP-1 and/or MIP-2 or their analogues to induce such a reduction. The MIP-1, MIP-2 or analogue may be operatively linked to a carrier. The MISP can be used to inhibit megakaryocytopolesis to effect in vivo reduction of platelet nos. They can be used to treat disorders with excessively high platelet counts such as thrombocytosis, stroke, pulmonary emboli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Macrophage inflammatory protein; megakaryocytopoiesis; MIP-1; MIP-2; thrombocythemia; reactive thrombocytosis; stroke; emboli; platelet; myeloproliferative disorder.

                                                        Treating myelosuppression or any condition involving
Treating myelosuppression or any condition involving
Treating myelosuppression or any condition involving
Tremunosuppression or low levels of haematopoietic cells
Claim 1; Page 21; 31pp; English.

Claim 1; Page 21; 31pp; English.

Claim 1; Page 21; 31pp; English.

Claim 2; Page 21; 31pp; English.

Claim 3; Polypeptide sequence comprises human gro beta. Use of
mammalian chemokines selected from gro alpha (W17670), gro beta,
carry commandation chemokines, optionally used together with a
growth factor or other haematopoietic regulator, are used to treat
myelosuppression or any condition that involves immunosuppression
or low levels of haematopoietic cells, e.g. infection, cancer,
myelosuppression or any condition that involves immunosuppression
or low levels of haematopoietic cells, e.g. infection of
myelosuppression or any condition that involves immunosuppression
or autoimmune disease, or low production/differentiation of
haematopoietic or bone marrow cells. A claimed application is in
c peripheral blood stem cell transplants in patients being treated by
chemotherapy. Chemokines having an N-terminal deletion are more
active, e.g. by 2 orders of magnitude, than the full-length protein.
When used with a colony stimulating factor (GSF, of GSF can be
reduced. Compared with conventional methods of stem cell transplants,
use of mammaolian chemokines provides a more rapid release of
peripheral blood mononuclear cells and/or platelets, reducing risk of
infection and allowing use of higher doses of chemotherapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inhibition of heparin or heparan sulphate degradation, potentially useful for treating arthritis, restenosis, cancer.

Claim 12; Page 40; 60pp; English.

Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in R70786-804. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVL1392 baculovirus vector, and expression in Sf9 cells in the presence of reduced sequence 102 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Macrophage inflammatory protein 2-alpha; gro-beta/MIP-2-alpha;

Two classes of human cDNA homologous to mMIP-2 were found designated alpha and beta. The alpha form reproduced here is claimed in W09200327; the beta form (Q20530) is claimed in W09200326. The alpha form is the more abundant of the two. The genes can be used to produce recombinant MIP proteins for use in wound healing, to modulate myelopoiesis and to induce adjuvant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           by screening

The sequence was deduced from the DNA sequence obtd. by screening the U937 cDNA library prepd. from poly-A+ RNA from PNA treated and LPS stimulated cells, using as probe a fragment isolated from the mMIP-2 cDNA (see Q20728) encoding most of the mature mMIP-2 amino
                                                                                                                                                                                                                                                                                                                                                                                          Human macrophage inflammatory protein 2-alpha - useful in treating infections, cancer, myelopoietic dysfunction and auto: immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .;

                           diagnosing colon cancer Claim 12: Fig 1B; 46pp; English.
The cDNA clone coding for inflammatory cytokine Gro-beta was lisolated from a mezerin- and calcium ionophore-stimulated leukocyte cDNA library. The amino acid sequence of Gro beta was deduced from the nucleotide sequence. The level of Gro beta in inflammatory response cells can be used as an indication of a test substance's liftlammatory activity and to diagnose colon cancer.

The sequence was deduced from the DNA sequence obtd. by screening the sequence was deduced from poly-A+ RNA from PAA treated and LPS stimulated cells, using as probe a fragment isolated from the mMIP-2 cDNA (see Q20612) encoding most of the mature mMIP-2 amino acid sequence. Two classes of human cDNA homologues to mMIP-2 amino found designated alpha and beta. The alpha form reproduced here is claimed in W09200327; the beta form (Q20614) is claimed in W09200326. The alpha form is the more abundant of the two. The wound healing, to modulate myelopoiesis and to induce adjuvant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human macrophage inflammatory protein 2-alpha - useful in treating infections, cancer, myelopoietic dysfunction and auto: immune diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New chimeric interleukin-8 polypeptide(s) - used for modulating IL-8 receptor-mediated biological responses, e.g. inhibiting signal
                                                                                                                                                                                                                                            Treating and preventing sepsis in animals - by using two modified gro b chemokines in conjunction with an anti-infective agent Example 1; Page 19; Z6pp; English.

This is the amino acid sequence of the human gro-gamma chemokine mature polypeptide. The invention relates to a method of preventing and treating sepsis using chemokines selected from mature or modified murine KC (see WB1497), or human gro-alpha (see WB1498), gro-beta (see WB1499) or gro-gamma (see WB1499). The modified gro-gamma comprises amino acids 5-73 of the mature polypeptide. A claimed method uses a dimer composed of 2 modified gro-beta
                                                                                                                                                                                                                                                                                                                                                                                                                               chemokines. Further claimed is administering the chemokine in conjunction with an anti-infective agent. The chemokines described in this invention are required to treat and prevent sepsis since antimicrobial agents alone have failed to abrogate septic mortality. Sequence 73 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-OCT-1997 (first entry)
Chimeric interleukin-8 receptor binding polypeptide G18132G.
Chimeric: IL-8: receptor mediated biological response; inhibition;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19..33 /note= "Amino acids 18 to 32 of SEQ ID NO:1 in the

chemokines (146G531 and 118G46I53G) also derived from human IL-8 and GRO-gamma, exhibit a chemokine protein structure capable of ILBR1 or ILBR2 binding. They can be used for modulating ILB used for inhibiting ILB receptor signal transduction.

N.B. The present sequence is not shown in the specification but is derived from SEO ID NO:1 and 2, see features table.
                                                                                                                                                                                                                                                                                                                                                                                                          Balcarek JM, Bhatnagar P, King AG, Pelus LM;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sepsis, particularly septic shock

Claim 1: Page 19-20: 28pp: English.

Claim 1: Page 19-20: 28pp: English.

Claim 1: Page 19-20: 28pp: English.

C administering to an animal an effective amount of a chemokine selected from mature murine KC (see W18023), human gro alpha (see W18024), human gro beta (see W18025) and human gro gamma (W18026), modified fragments of these chemokines and multimeric proteins comprising an association of two chemokine proteins. Sepsis can occur in hospitalised patients, and a consequence of bacterial septic shock. The method of the invention provides a treatment for sepsis, particularly septic shock, which is a major cause of death in intensive care units. Septic shock syndrome apparently has intractable resistance to the effects of a variety
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             use of mammaolian chemokines provides a more rapid release of peripheral blood mononuclear cells and/or platelets, reducing risk of infection and allowing use of higher doses of chemotherapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Use of chemokine(s) such as KC and gro-alpha - to treat or prevent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô

Interleukin-8 receptor 1 specific binding domain peptide(s) - used

T interleukin-8 receptor 1 specific binding domain peptide(s) - used

PT to modulate IL-8R1 mediated biological response

PS Example 3; Page 42; 51pp; English.

This is the amino acid sequence of a protein (not designated in this specification but thought to be GRO(gamma), an agonist of the human consideration but thought to be GRO(gamma). The protein with corresp. The protein was used to generate GRO(gamma)/IL-8R1 binding domain chimaeras by replacing selected residues from the GRO(gamma) protein with corresp. residues from the GRO(gamma) protein with corresp. residues from the sind of the IL-8R binding peptide with residues from the specific comprising an IL-8R2 binding peptide with residues from the specific comprising and IL-8R2 binding peptide with residues from the specific comprising of the IL-8 in particular, residues are found in the amino-terminal loop and strand 3 of the 3 stranded anti-parallel controlled to the IL-8 in particular, residues 11 (Lys), and (Tyr), 48 (Glu), 49 (Leu) and 53 (Pro) of the continuous insertions or deletions of these residues may alter controlled to enhance) IL-8 binding to the R1 receptor. Since IL-8 is a channer or an IL-8R1 mediated biological response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                31-JUL-1996 (first entry)
Protein used to generate IL-8/Gro(gamma) chimeric peptides.
Protein used to generate IL-8/Gro(gamma) chimeric receptor;
Native; human, interleukin-8; specific binding domain; receptor;
amino-terminal loop; anti-parallel; beta-sheet; Greek key; substitution;

Database:

swiss-prot37 1:swissprot

Mean 23.866;

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Variance 26.272; scale 0.908

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            determined by 1H NMR spectroscopy.";
J. BIOL. CHEM. 269:32909-32915(1994).
-!- FUNCTION: HAS CHEMOTACTIC ACTIVITY FOR NEUTROPHILS. MAY PLAY A ROLE IN INFLAMMATION AND EXERTS ITS EFFECTS ON ENDOTHELIAL CELLS IN AN AUTOCRINE FASHION.
-!- SIMILARITY: BELONGS TO THE INTERCRINE ALPHA FAMILY (SMALL CYTOKINE C-X-C) (CHEMOKINE CXC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PFAM; PF00048; i18; 1.

"Cytokine-induced neutrophil chemoattractant (CINC)-2 alpha, a novel member of rat GRO/CINCs, is a predominant chemokine produced by lipopolysaccharide-stimulated rat macrophages in culture.";

BIOCHEM. BIOPHYS. RES. COMMUN. 220:945-948(1996).

-! FUNCTION: CHEMOTACTIC FOR HUMAN POLYMORPHONUCLEAR LEUKOCYTES BUT DOES NOT INDUCE CHEMOKINESIS OR AN OXIDATIVE BURST. CONTRIBUTES TO NUTRIENT ACTIVATION DURING INFLAMMATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -i-TISSUE SPECIFICITY: AT LEAST EXPRESSED IN THE LUNG AND TRACHEA.
-i-INDUCTION: IN LUNG, BY LIPOPOLYSACCHARIDE OR INFLAMMATION.
-i-SIMILARITY: BELONGS TO THE INTERCRINE ALPHA FAMILY (SMALL CYTOKINE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 "Identification of cytokine-induced neutrophil chemoattractants (CINC), rat GRO/CINC-2 alpha and CINC-2 beta, produced by granulation tissue in culture: purification, complete amino acid sequences and characterization.";

Fri Feb 4 18:14:20 2000; MasPar time 3.60 Seconds 133.572 Million cell updates/sec Run on:

protein - protein database search, using Smith-Waterman algorithm

MPsrch_pp

Tabular output not generated.

>US-09-150-813-74 (1-12) from US09150813.pep 86

Title: Description: Perfect Score: Sequence:

1 KACLNPASPMVQ 12

PAM 150 Gap 15 Scoring table:

122810 seqs, 40068593 residues Searched:

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

1:pirl 2:pir2 3:pir3 4:pir4 pir60

Mean 23.035; Variance 28.866; scale 0.798 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chimeric interleukin-8 receptor binding polypeptide G18132G. Chimeric; IL-8; receptor mediated biological response; inhibition; signal transduction; chemokine; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            We of chemokine(s) such as KC and gro-alpha - to treat or prevent sepsis, particularly septic shock claim 1; Page 19-20; 28pp; English.

A claimed method of treating or preventing sepsis comprises administering to an animal an effective amount of a chemokine selected from mature murine KC (see W18023), human gro alpha (see W18023), human gro beta (see W18023), and human gro alpha (see M18024), human gro beta (see W18025) and human gro pamma (W18026), modified fragments of these chemokines and multimeric proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "Amino acids 18 to 32 of SEQ ID NO:1 in the specification from human interleukin-8"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note= "Amino acids 34 to 73 of SEQ ID NO:2 in the specification from GRO-gamma"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            comprising an association of two chemokine proteins. Sepsis can occur in hospitalised patients, and a consequence of bacterial sepsis is septic shock. The method of the invention provides a treatment for sepsis, particularly septic shock, which is a major cause of death in intensive care units. Septic shock syndrome apparently has intractable resistance to the effects of a variety of highly potent antimicrobial agents. Survival is increased by treatment with the chemokines, both prophylactically and after
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note= "Amino acids 1 to 18 of SEQ ID NO:2 in the specification from GRO-gamma"

Interleukin-8 receptor 1 specific binding domain peptide(s) - used to modulate IL-8RI mediated biological response

To modulate IL-8RI mediated biological response

To modulate IL-8RI mediated biological response

Example 3: Page 42: 51pp; English.

Example 3: Page 42: 51pp; English.

Example 3: Page 42: 51pp; English.

Co This is the amino acid sequence of a protein (not designated in this specification but thought to be GRO(gamma), In-8RI binding domain chimaeras by replacing contected residues from the GRO(gamma) Protein with corresp. residues from IL-8R binding peptide with residues from the specific comprising an IL-8R2 binding peptide with residues from the specific comprising an IL-8R2 binding peptide with residues from the specific conprising an IL-8R2 binding peptide with residues from the specific conprising an IL-8R2 binding peptide with residues from the specific conprision of the IL-8 receptor type R1. These domains are found in the amino-terminal loop and strand 3 of the 3 stranded anti-parallel CC beta-sheet (Greek key) of IL-8. In particular, residues 11 Lys),

Continuing domain for the form principle contents and 53 (pro) of the continuing to the IL-8 R1 receptor.

Continuing domain for the IL-8 in particular, residues may alter comparing the mediated biological response.

Condition of the M1 mediated biological response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      31-JUL-1996 (first entry)
Protein used to generate IL-8/Gro(gamma) chimeric peptides.

                                                                                                                                                                                                                     The present sequence represents a specifically claimed chimeric polypeptide (1813cg derived from human interleukin-8 (IL-8) and GRO-gamma. This polypeptide and similar examples of chimeric chemokines (146531 and 118646153G) also derived from human IL-8 and GRO-gamma, exhibit a chemokine protein structure capable of ILBR1 or ILBR2 binding. They can be used for modulating IL8 receptor-mediated biological responses. In particularly, they can be used for inhibiting ILB receptor signal transduction.

N.B. The present sequence is not shown in the specification but is derived from SEQ ID NO:1 and 2, see features table.
                                                                                 for modulating IL-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

A claimed method for reducing the no. of circulating platelets in the bloodstream of a mammal comprises admin. of MIP-1 and/or MIP-2 or their analogues to induce such a reduction. The MIP-1 in MP-2 or analogue may be operatively linked to a carrier. The MIP-2 or used to inhibit megakaryocytopolesis to effect in vivo reduction of platelet nos. They can be used to treat disorders with excessively high platelet counts such as thrombocytosis, stroke, pulmonary embolicand myeloproliferative disorders.
                                                                             Macrophage inflammatory protein; megakaryocytopoiesis; MIP-1; MIP-2; thrombocythemia; reactive thrombocytosis; stroke; emboli; platelet; myeloproliferative disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New truncated chemokine with increased biological activity - and

Treating myelosuppression or any condition involving treating myelosuppression or any condition involving treating myelosuppression or any condition involving treating myelosuppression or low levels of haematopoietic cells profit manusuppression or low levels of haematopoietic cells profit projection sequence comprises human gro gamma. Use of mammalian chemokines selected from gro alpha (W17670), gro beta (W17671), gro gamma or KC (W17669) for mobilising haematopoietic cells is claimed. The chemokines, optionally used together with a crowth factor or chemokines, optionally used together with a growth factor or chemokines, optionally used together with a crowth levels of haematopoietic regulator, are used to treat myelopoietic dysfunction, haematopoietic cells, e.g. infection, cancer, myelopoietic of bone marrow cells. A calaimed application of or autoimmune disease, or low production/differentiation of crompartic dysfunctions having an N-terminal deletion are more centive, e.g. by 2 orders of magnitude, than the full-length protein. When used with a colony stimulating factor (CSF), a synergistic creduced. Compared with conventional methods of stem cell transplants, cuell of mammaolian chemokines provides a more rapid release of coperipheral blood mononnelear cells and/or nia*release of coperipheral blood mononnelear cells and/or nia*release of coperipheral blood mononnelear cells and/or nia*release of coperipheral blood mononnelear cells and correspondents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Claim 25; Fig 1B; 46pp; English.
The cDNA clone coding for inflammatory cytokine Gro-gamma was isolated from a mezerin- and calcium ionophore-stimulated leukocyte cDNA library. The amino acid sequence of Gro gamma was deduced from the nucleotide sequence. The level of Gro gamma in inflammatory response calls can be used as an indication of a test substance's inflammatory activity and to diagnose certain cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure: Fig 3; 68pp; English.

The sequence was deduced from the DNA obtd by screening the U937 CDNA library prepd. from poly-4+ RNA from PNA treated and LPS stimulated cells, using as probe a fragment isolated from the mMIP-2 cDNA (see Q20728) encoding most of the mature mMIP-2 amino acid sequence. Two classes of human cDNA homologus to mMIP-2 were found designated alpha and beta. The alpha form (Q20729) is W09200325. The alpha form is the more abundant of the two. The genes can be used to produce recombinant MIP proteins for use in wold healing, to modulate myelopoiesis and to induce adjuvant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human macrophage inflammatory protein 2-beta - for treating infections, cancer, myelopoietic dysfunction and auto:

Two classes of human cDNA homolgous to mMIP-2 were found designated alpha and beta. The alpha form (Q20613) is claimed in W09200327; the beta more abundant of the two. The genes can be used to produce recombinant MIP proteins for use in wound healing, to modulate myelpopiesis and to induce adjuvant activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the amino acid sequence of the human chemokine gro-beta mature polypeptide. The invention relates to a method of preventing and treating sepsis using chemokines selected from mature or modified murine KC (see W81497), or human gro-alpha (see W81498), gro-beta or gro-gamma (see W81499). A claimed method uses a dimeric chemokine consisting of 2 covalently linked modified gro-beta proteins (amino acids 5-73 of the mature polypeptide) in which the proteins are linked by 2 intermolecular disulphide bonds between C5-C31 and C7-C47. Further claimed is administering the chemokine in conjunction with an anti-infective agent. The

           potentially useful for treating arthrifis, restenosis, cancer. Claim 12; Page 41-42; 60pp; English.

Claim 12; Page 41-42; 60pp; English.

Burlified heparamases, prepared under reducing conditions and activated with transglutaminase, are given in R70786-804. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVL1392 baculovirus vector, and expression in Sf9 cells in the presence of reduced Sequence 107 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Treating and preventing sepsis in animals - by using two modified grob behaviores in conjunction with an anti-infective agent Example 1; Page 18; 26pp; English.

Whis possible chemokine(s) for stem cell mobilisation - useful for treating myelosupression or any condition involving immunosuppression or low levels of haematopoietic cells immunosuppression or low levels of haematopoietic cells immunosuppression or low levels of haematopoietic cells.

This polypeptide sequence comprises human gro beta. Use of mammalian chemokines selected from gro alpha (W17670), gro beta, or or other haematopoietic regulator, are used to treat myelogupression or any condition that involves immunosuppression or any condition in the disease, or low production/differentiation of active, e.g. by 2 orders of magnitude, than the full-length protein. When used with a colony stimulating factor (CSF), a synergistic effect is achieved and the dose, and side-effects, of CSF can be effect is achieved with conventional methods of stem cell transplants, use of mammaolian chemokines provides a more rapid release of

32 Toke of chemokine(s) such as KC and gro-alpha - to treat or prevent sepsis, particularly septic shock

33 Toke of chemokine(s) such as KC and gro-alpha - to treat or prevent sepsis, particularly septic shock

34 Claim i Page 19; 28pp; English.

35 A claimed method of treating or preventing sepsis comprises administering to an animal an effective amount of a chemokine

36 A claimed method of treating or preventing sepsis comprises

37 A claimed method of treating or preventing sepsis comprises

38 A claimed method of treating or preventing sepsis can occur in hospitalised of these chemokines and multimeric

38 Drotteins comprising an association of two chemokine proteins.

38 Can occur in hospitalised patients, and a consequence of bacterial sepsis is septic shock. The method of the invention

38 Caption and an intensive carse units. Septic shock

39 Softward and a consequence of death in intensive care units. Septic shock

39 Softward and a fightly potent antimicrobial agents. Survival is increased by treatment with the chemokines, both prophylactically sequence 73 AA;
peripheral blood mononuclear cells and/or platelets, reducing risk of infection and allowing use of higher doses of chemotherapeutic
                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
